EXPERIMENT 14

SHIV NADAR UNIVERSITY

Experiment No. 14

Interactive Sales Dashboard Using Drill-Down and Bookmarks

“The ability to simplify means to eliminate the unnecessary so that the necessary may speak.”

— Hans Hofmann

Introduction

An effective sales dashboard not only presents key figures but also allows users to explore deeper levels of data through **drill-down** and **bookmarks**. Drill-down lets users navigate from a high-level summary (e.g., yearly sales) to detailed views (e.g., monthly, product-wise), enhancing the dashboard's interactivity. Bookmarks, on the other hand, save specific views or filters and can be used to create guided experiences, toggle visuals, or build custom navigation.

This experiment introduces the creation of an interactive sales dashboard using drill-down hierarchies and bookmarks in Power BI to support detailed data exploration and storytelling.

Aim:

To design an interactive sales dashboard in Power BI by using drill-down capabilities and bookmarks to enhance user navigation and enable detailed data exploration.

Objective

To develop a sales dashboard in Power BI that incorporates drill-down features and bookmarks to enable dynamic exploration and storytelling of sales data.

BOOK MARK

The image shows the Tableau 'Visualizations' pane. At the top, there are navigation arrows and the title 'Visualizations'. Below this is the 'Build visual' section, which includes a 'Visualizations' icon (a grid of colored squares) and a 'Build visual' icon (a document with a pencil). A grid of various chart types is displayed, including bar charts, line charts, pie charts, and maps. Below the chart grid is the 'Values' section, which contains the text 'Add data fields here', 'Drill through', 'Cross-report' (with a toggle switch set to 'Off'), 'Keep all filters' (with a toggle switch set to 'On'), and 'Add drill-through fields here'.
